FRONTEND

- HTML
- Tailwind CSS
- Angular
- Bootstrap
- React

BACKEND

- PHP
- Node.js
- REST API

DATABASE

- MySQL
- MariaDB

TOOLS & TECHNOLOGIES

- Git
- GitHub
- XAMPP
- Docker
- VS Code
- Figma
- Postman

OTHER SKILLS

- Database Design
- Responsive Web Design
- Authentication & Authorization
- IT Support
- Network Troubleshooting
- AI-Assisted Software Development
- Prompt Engineering

EDUCATION

Pattani Technical College

Vocational Certificate in Computer Technical
Graduated: 2022

Rajamangala University of Technology Srivijaya, Songkhla Campus

Bachelor of Engineering (Computer Engineering)
Graduated: 2026

WEB DEVELOPER

Recent Computer Engineering graduate from Rajamangala University of Technology Srivijaya with hands-on experience in web application development using PHP, JavaScript, SQL, HTML, and CSS. Experienced in developing management systems, inventory systems, and esports-related platforms through academic and industrial projects. Passionate about web development, problem-solving, and building user-friendly applications.

WORK EXPERIENCE

Network Engineer M.I.S Network Engineering Intern May 2021 – August 2021

- Installed and configured network infrastructure and security systems.
- Performed maintenance and troubleshooting for computer hardware and software.
- Provided technical support for employees and organizational IT systems.

IT Intern Digital Technology Center, Prince of Songkla University Pattani Campus February 2025 – April 2025

- Designed and developed websites for the Digital Technology Center.
- Improved website functionality and user experience.
- Collaborated with staff to gather requirements and implement web solutions.

IT Intern TECHSPACE COMPANY LIMITED November 2025 – March 2026

- Participated in the development of an Asset Inventory Management System.
- Developed web application modules using PHP, JavaScript, HTML, CSS, and SQL.
- Assisted in database design and system testing.
- Worked with team members to improve system usability and functionality.

PROJECTS

IoT Air Quality Monitoring System (Personal Project)

- Developed an IoT-based air quality monitoring solution using ESP32 and environmental sensors.
- Implemented data acquisition and transmission from sensors to a centralized database.
- Designed and developed a web dashboard for real-time monitoring and visualization of air quality data.
- Managed database storage and retrieval for historical environmental data analysis.
- Improved accessibility of air quality information through a responsive web interface.

Computer Laboratory Reservation Website (Internship Project)

- Developed a web-based reservation system for computer laboratories using React and Node.js.
- Implemented booking management and scheduling functionality to streamline laboratory reservations.
- Integrated 360-degree virtual room visualization, allowing users to explore laboratory facilities before making reservations.
- Designed responsive user interfaces and interactive user experiences using React.
- Developed backend services and API endpoints with Node.js to manage reservation data and user requests.
- Implemented database integration for storing reservation records, laboratory information, and user data.

Asset Inventory Management System (Internship Project)

- Developed a full-stack web application for managing the borrowing and returning of organizational assets.
- Implemented inventory tracking features to monitor asset availability, borrowing records, and return status.
- Developed asset request and approval workflows to streamline asset management processes.
- Designed and implemented RESTful APIs using Node.js for asset and transaction management.
- Built responsive user interfaces using React, Bootstrap, HTML, and CSS to improve user experience.
- Designed and managed database structures for assets, users, and borrowing transactions.
- Implemented role-based access control for administrators and users.
- Generated borrowing history and inventory reports to support asset tracking and auditing.

Valorant Esports Training and Strategy Analysis Platform (Capstone Project)

- Developed a web-based platform for esports team training and strategy management.
- Implemented a team recruitment system that allows players to create profiles, apply for teams, and manage recruitment requests.
- Developed performance tracking features to record and analyze player statistics, match results, and individual performance metrics.
- Designed and implemented a strategy board management system for organizing team tactics, map strategies, and training plans.
- Built a role-based authentication and authorization system with separate access levels for administrators, team leaders, and players.
- Designed and managed a MySQL database structure for user management, recruitment records, strategy data, and performance analytics.
- Developed using PHP, MySQL, JavaScript, HTML, CSS, and Bootstrap.
